

Apresentação Geral

Os 3 negócios Deublin

O maior fabricante mundial de uniões rotativas de precisão.

A maior base instalada de sifões estacionários de alta velocidade.

Uniões elétricas para transmissão de sinal e/ou potência para máquinas rotativas

Porque Deublin?

História de avanços tecnológicos

Profundo conhecimento do projeto e engenharia da união

Uniões são nosso único negócio!

Escritórios em quatro continentes

Fabricação em três continentes

A maior gama de indústrias atendidas

Desenvolvimento constante de aplicações customizadas

- *Uniões rotativas*
- *Juntas de vapor & Sistemas de sifão*
- *Sistemas otimizados de vapor*
- *Slip Rings / Anéis deslizantes*

Fundada em 1945

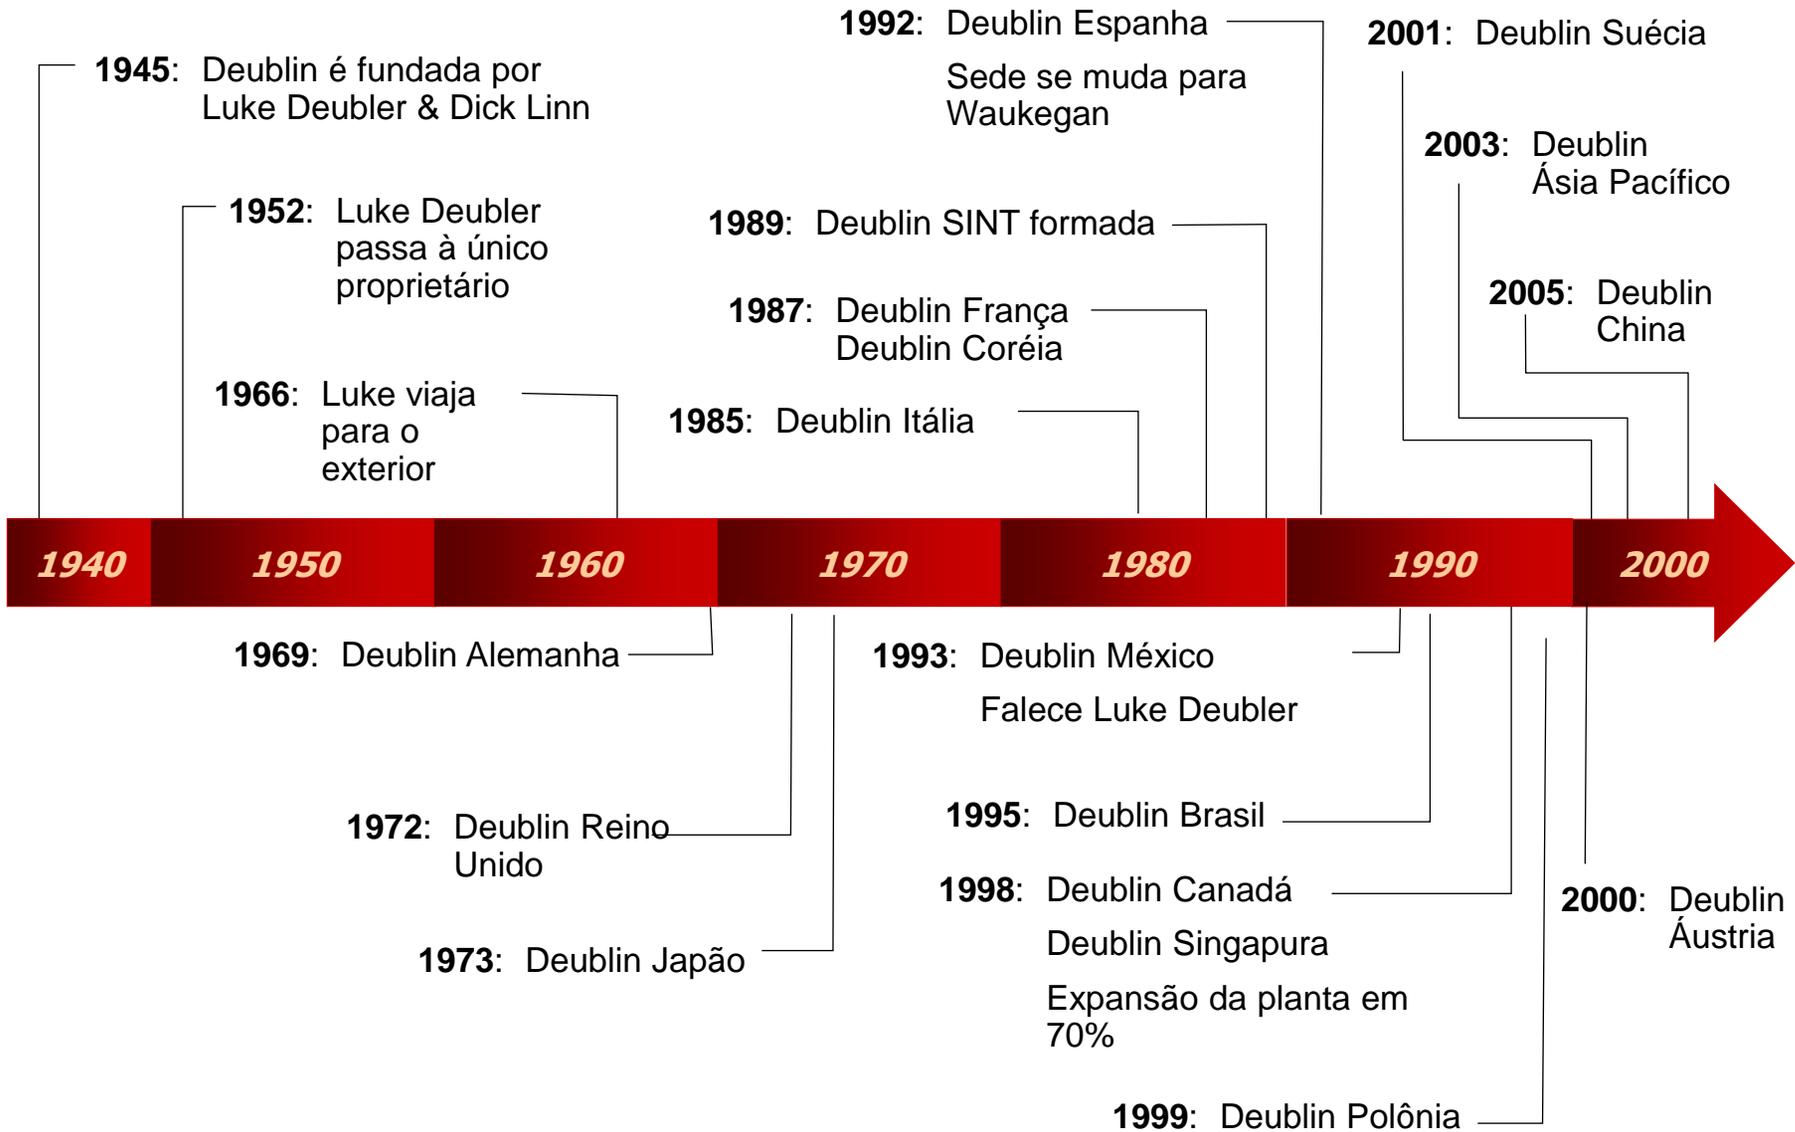

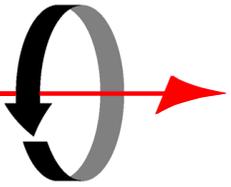

Presença internacional desde 1969

Atendimento técnico de campo

Cuidados na Instalação

Instruções de Instalação da Mangueira Flexível para as Juntas Rotativas DEUBLIN

1 Monte o corpo em uma morsa e instale a mangueira.

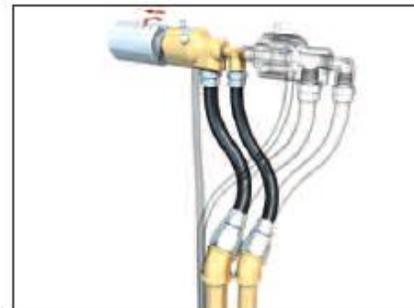

2 Instale a junta rotativa na máquina.

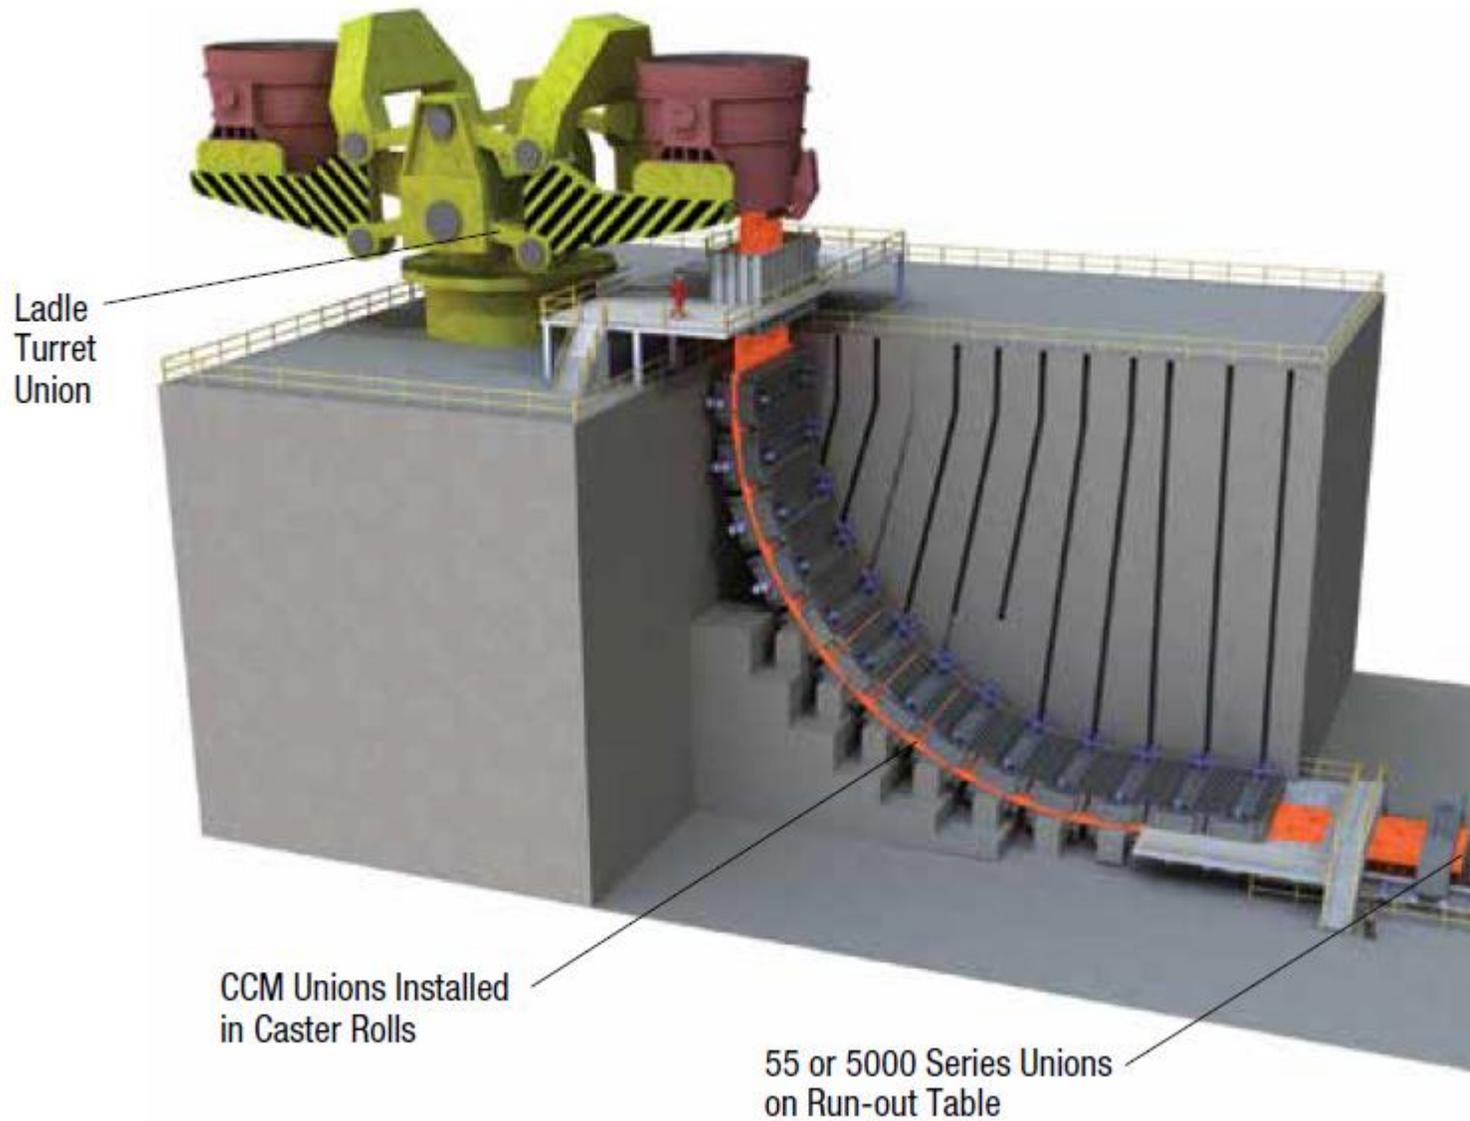

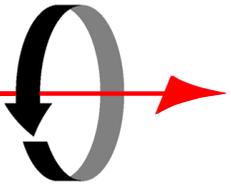

3 Conecte a mangueira flexível à linha de alimentação.

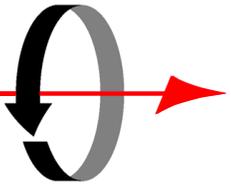

Exemplos de Instalação da Mangueira Flexível

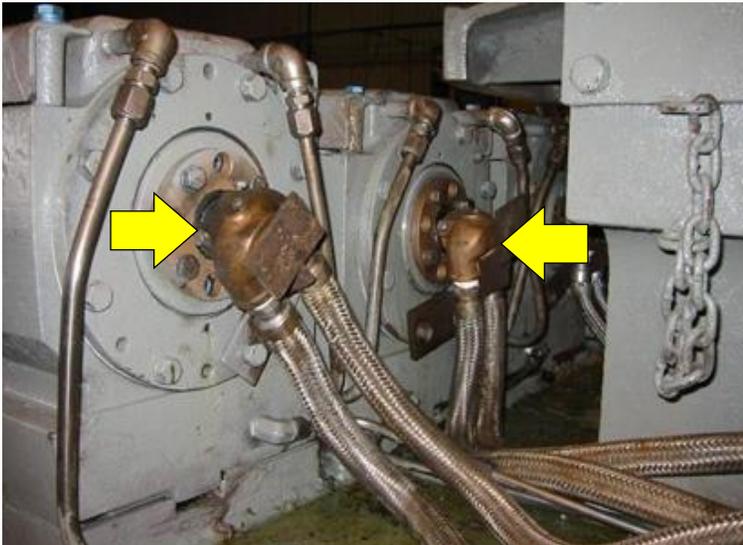

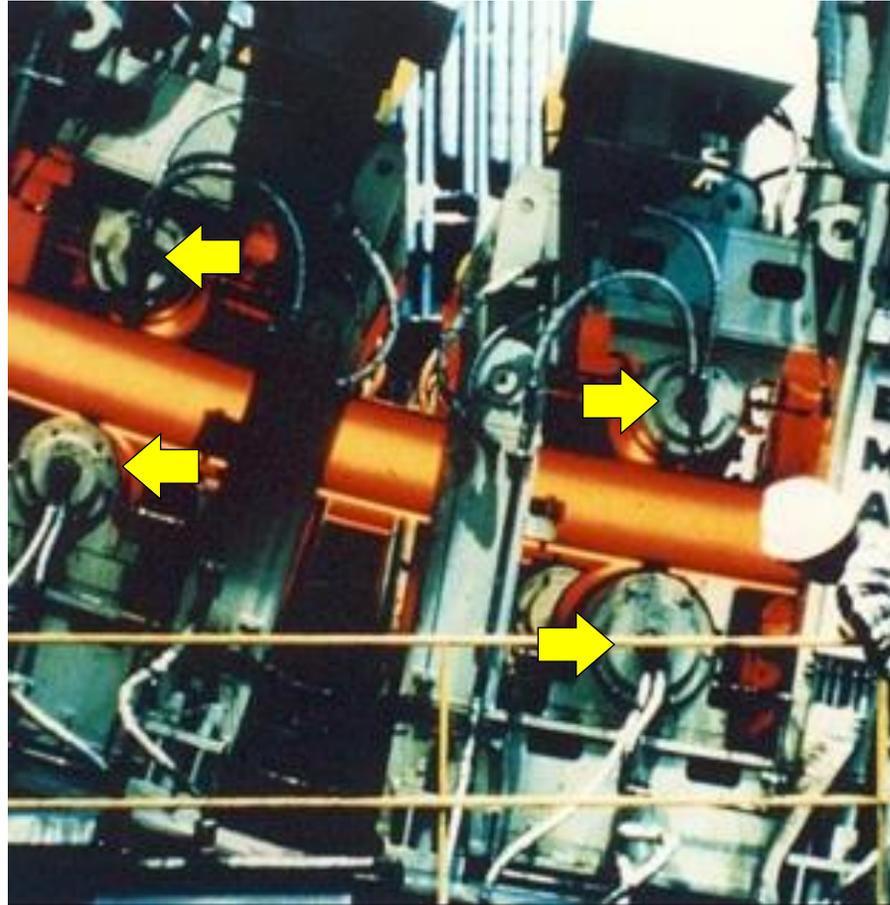

Indústrias siderúrgicas

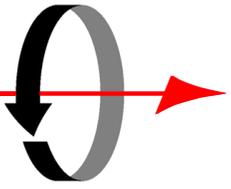

Lingotamento contínuo de aço

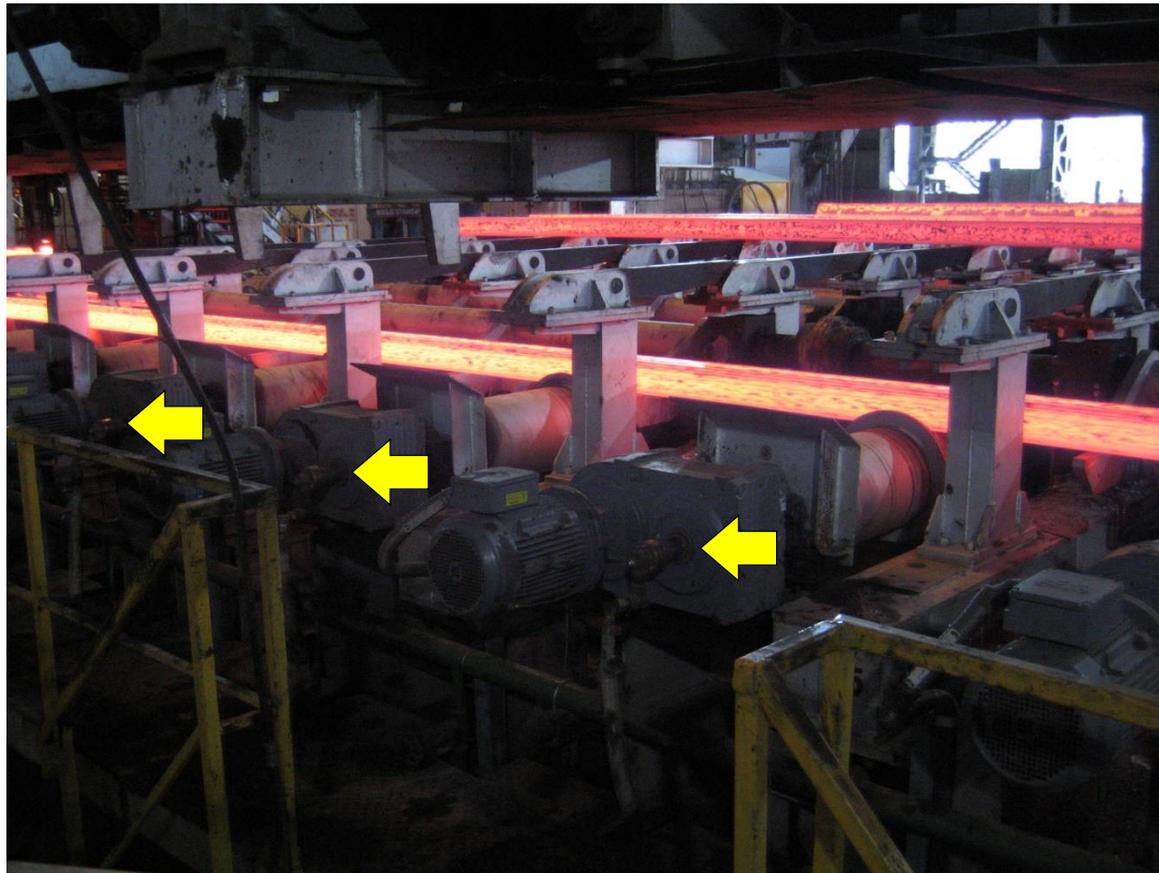

**Deublin Série 2400
(rolos de lingotamento)**

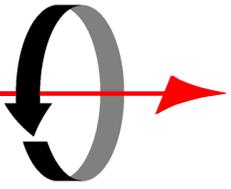

Lingotamento contínuo de aço

Deublin Série 55 / 57 (mesa de rolos)

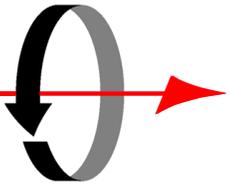

Acionamentos hidráulicos

Deublin Série 2117 (Aciaria)

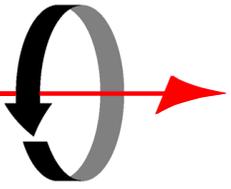

Forjarias

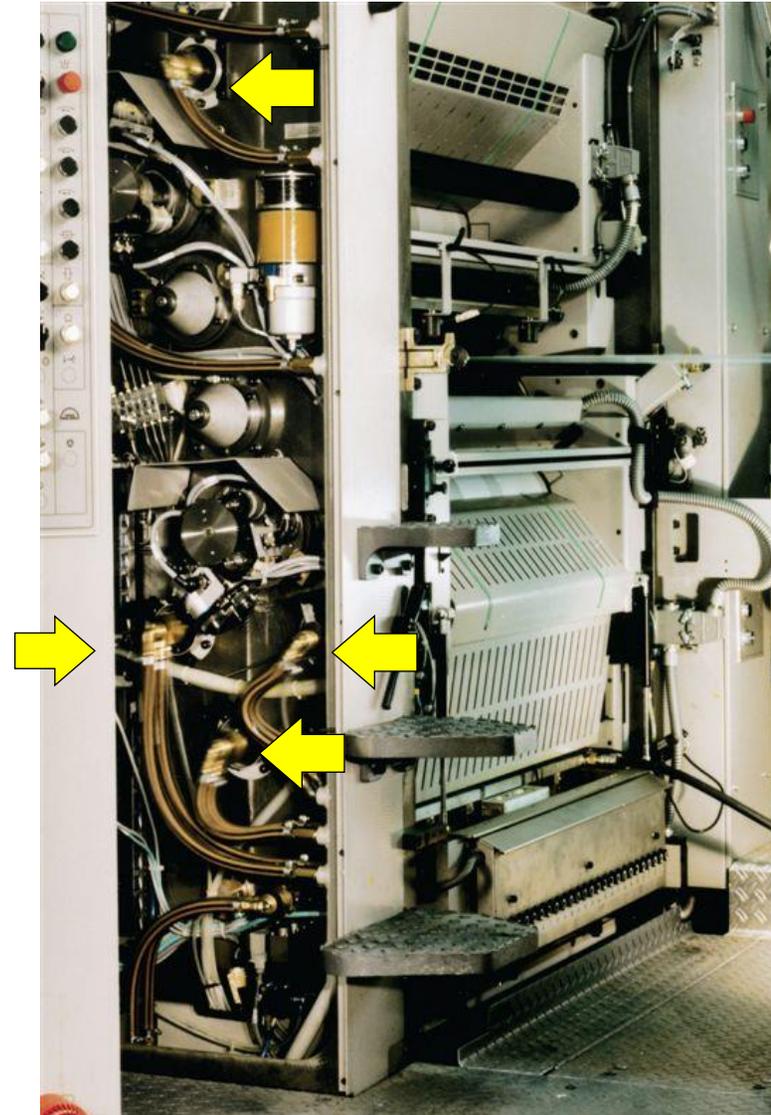

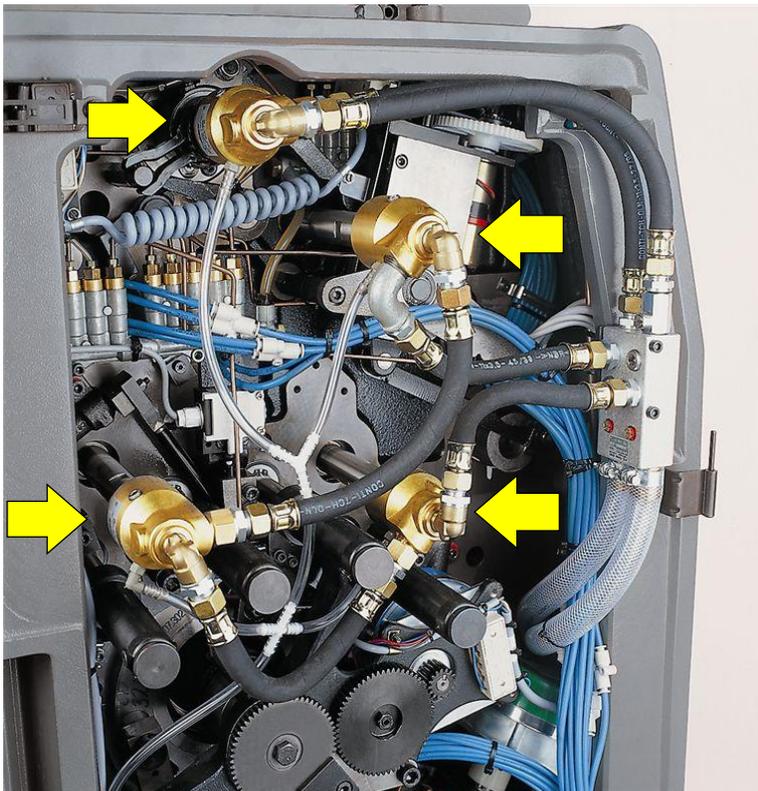

Deublin Série 55

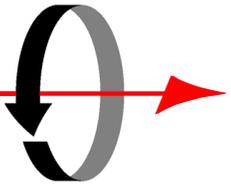

Indústrias gráficas

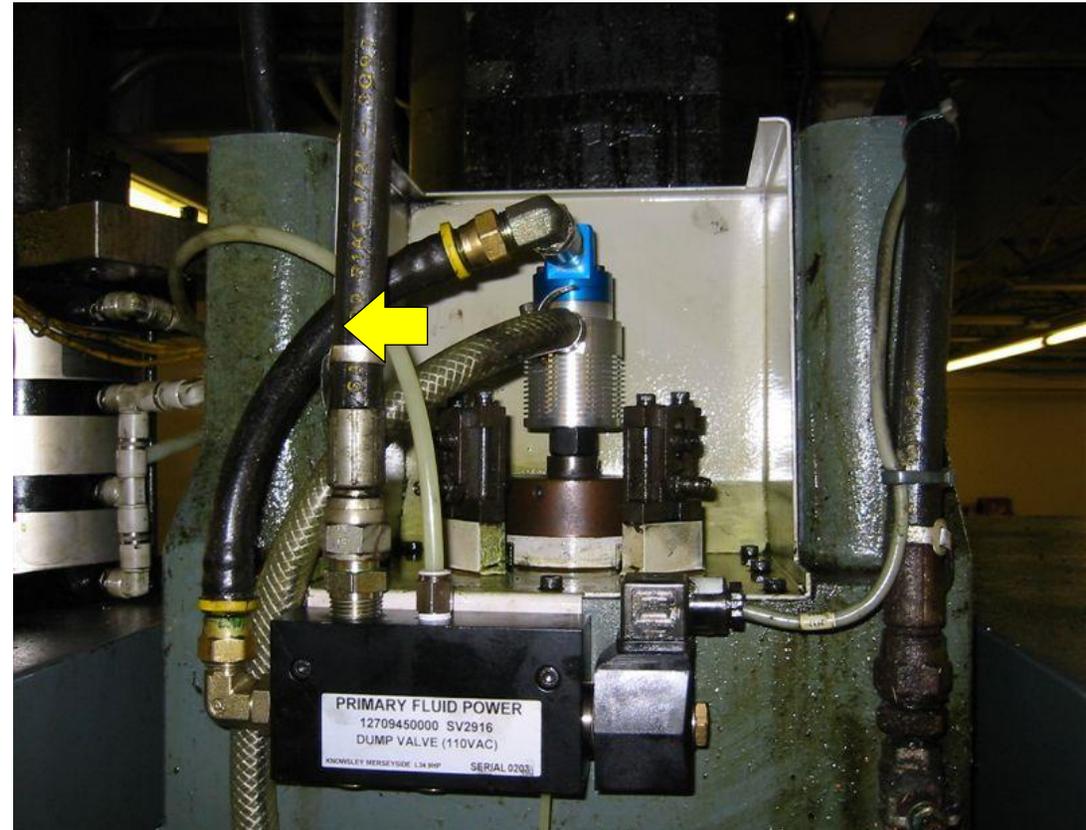

Deublin Série 57

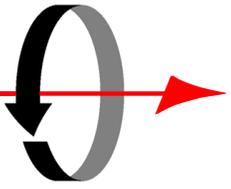

Indústrias de usinagem

SR0138
Ethernet / Potência / Ar

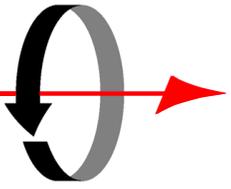

Turbinas hidro

Deublin Série 7100

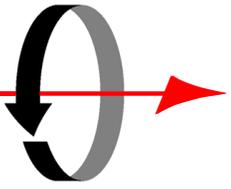

Perfuração

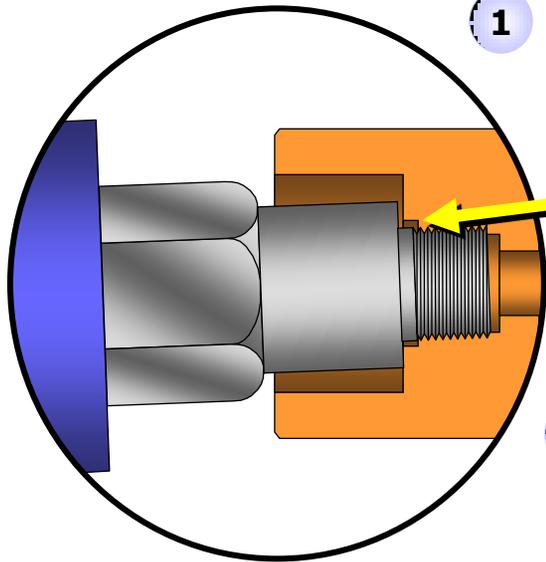

Indústrias "Oil & Gas" / Perfuração direcional

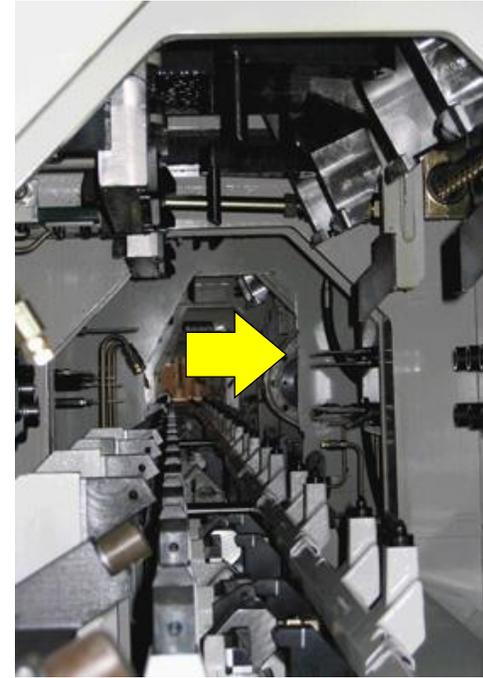

Problemas de instalação

Efeito de desalinhamento

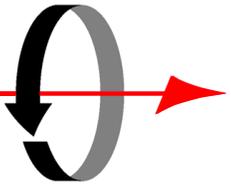

- 1** Rosca malfeita em spindle recuperado, com ângulo em relação ao eixo de rotação.
- 2** A união foi instalada corretamente mas o desalinhamento da rosca não permite o assentamento correto.
- 3** Quando a máquina estiver em operação, toda a união orbita no eixo do spindle.

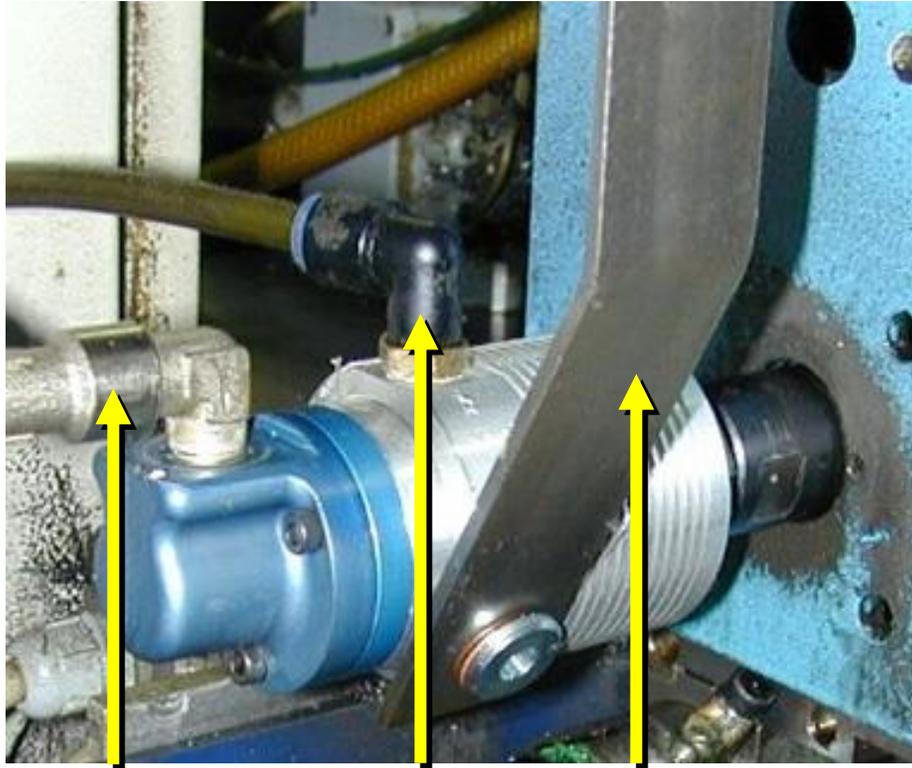

- 4** O movimento orbital causa roçamento entre a carcaça e a máquina / spindle.
- 5** Stress repetitivo causa a fratura na união do rotor, interrompendo o fluxo de refrigerante.
- 6** Sem o refrigerante, o suporte sobreaquece e funde na guia. A máquina continua trabalhando até que a ferramenta se quebra, empurrando o suporte contra a seção quebrada.
- 7** O suporte fundido deve ser cortado antes que a peça de trabalho possa ser removida.

Problemas de instalação

Instalação incorreta

Tubulação de entrada rígida cria carga lateral nos selos e rolamentos.

Dreno para cima

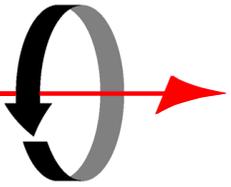

Cinta metálica presa no dreno, evita a flutuação, carregando excessivamente os rolamentos.

Filtragem

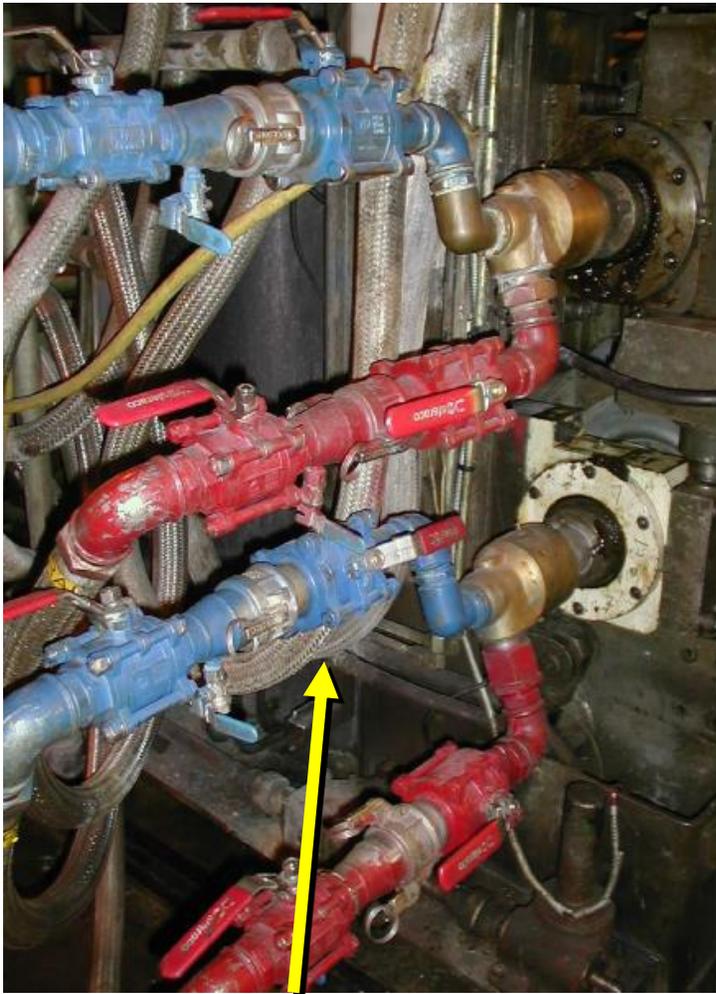

As faces do selo trabalham bem, mas o acúmulo de detritos evita que o sistema "pop-off" funcione corretamente.

Problemas de instalação

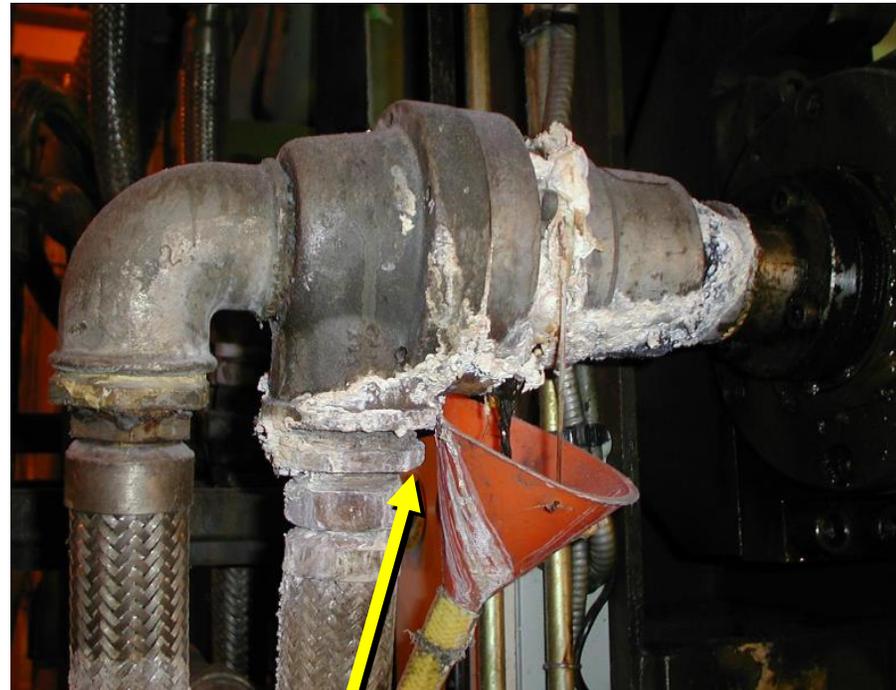

Conexão de mangueira imprópria

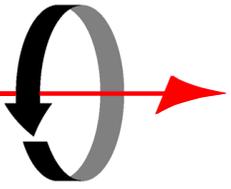

Válvulas pesadas suportadas pelos mancais das uniões; carga excessiva nos rolamentos.

Dreno permanente?

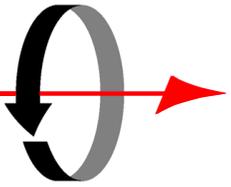

Selo vazando!!

Reparos Deublin

Você sabia que a maioria das uniões rotativas Deublin são reparáveis?

Reparos Deublin

REPAROS DE UNIÕES ROTATIVAS

As uniões rotativas DEUBLIN, além da qualidade, têm como diferencial a possibilidade de reparo para quase toda a linha. Assim, o produto DEUBLIN terá maior vida útil de operação com menor custo.

PROCESSO DE INSPEÇÃO E REPARO

As uniões a serem reparadas passam por rigoroso e detalhado processo de inspeção contemplando a desmontagem para análise individual de cada componente. Dentre os serviços, destacamos:

- Troca de rotor, rolamentos e vedações de acordo com o modelo.
- Garantia de reparo e montagem.
- Garantia estendida do produto.

Veja o resultado de alguns modelos que passaram por processo de reparação:

Séries para USO GERAL

Séries para PNEUMÁTICA E HIDRÁULICA

REPAROS DE UNIÕES ROTATIVAS

água • vapor • ar • hidráulicos
óleo térmico • vácuo • aplicações especiais

Séries para VAPOR E ÓLEO TÉRMICO

Séries para SIDERURGIA

EM SÍNTESE: maior operação com menor custo

O reparo de uniões feito pela DEUBLIN Brasil garante:

- A mesma qualidade e vida útil de um produto novo.
- Expressiva redução no investimento para aquisição de uma nova união (30% a 70%).

A DEUBLIN, empresa americana fundada em 1945, é a maior fabricante de uniões rotativas do mundo e possui a maior base instalada de sifões estacionários com unidades fabris na América, Ásia e Europa.

Desde 1995 está presente no Brasil oferecendo suporte técnico e comercial. Estabeleceu-se em novas instalações, em 2015, com estrutura completa e equipamentos de alta tecnologia para prestar serviços de reparos em uniões rotativas.
